

COMP 4350 Project Iteration 1

Group E (PartEz)

Implementation:

(8/11)

- Fully working features for the user stories planned for iteration 1. (3/6)

Some features are missing, e.g., Add pool, Invitation, Event chat, RSVP, Event Finalization features were not implemented (-3)

Problem in sending invitation email

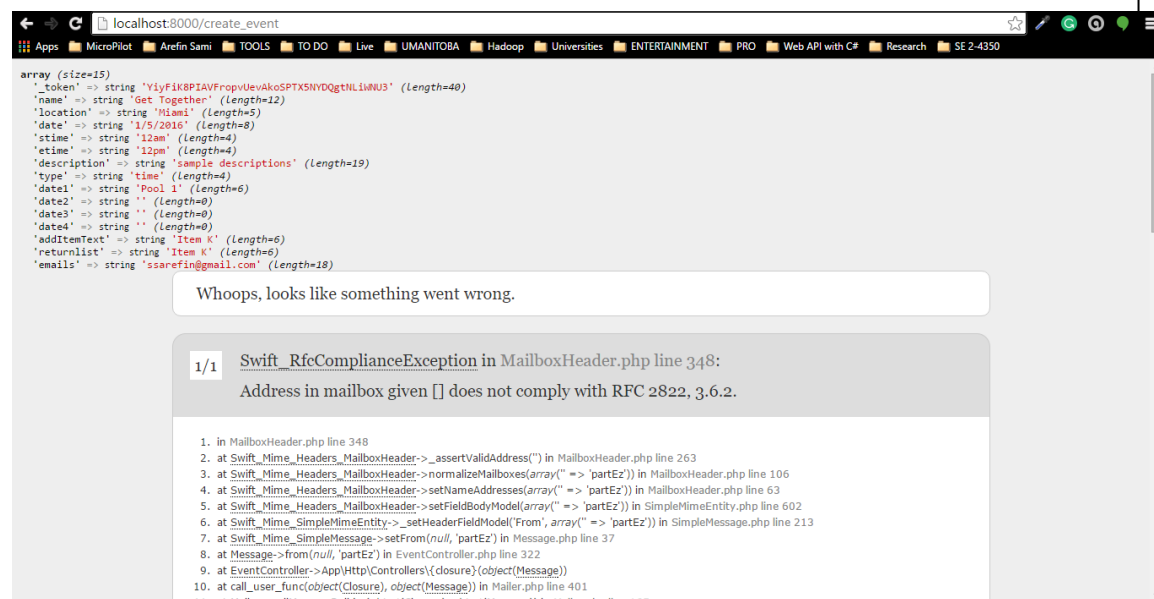

error: Maximum function nesting level of '100' reached, aborting!

You should add this line in bootstrap/autoload.php

ini_set('xdebug.max_nesting_level', 500);

You should return a success message after creating any records.

It creates the event but still shows error. Handle all exceptions and return proper message.

Form works even with invalid data type.

Your plan was optimistic and you missed several detailed stories. Make sure you plan smarter next time.

- Back-end unit tests (dependencies to UI, DB, or other classes should be stubbed/mockd out) (3/3)
- At least one integration test per detailed story (2/2)

I get this when I run you test suite. Some of your tests actually fail and some has error.

.....EEE.....FFF

Time: 1.36 minutes, Memory: 52.00Mb

There were 3 errors:

1) IntegrationTest::testCreateEvent

InvalidArgumentException: Could not find a form that has submit button [Next].

```

3) Warning
No tests found in class "HomeControllerTest".

FAILURES!
Tests: 34, Assertions: 104, Errors: 3, Failures: 3.

Design:

(5.5/9)

- Good programming practices (2/2)
- Proper design patterns (1.5/3)

Model class should be in the model folder. (-0.5)
You should not implement your business logics in controllers. You should not directly query database from controllers. You should separate business logics from controllers. Controllers should be as clean as possible. (-1)

- Architecture sketch showing high-level components/services and the important relationships between them plus some important classes within components. (2/4)

The actual deployment into physical servers should be visible in architectural diagrams. (-1)
You should explicitly point out the layers of you application. (-1)

Planning:

(3/5)

- Team's communication and members' contributions (2/3)

You should provide actual communication log otherwise, we cannot verify if you are really communicating with each other or not. Your document should also say who is doing what. There should be a proper explanation If somebody fails to do what he was assigned to so. If you are using any messaging tool, do not forget to share the link. (-1)

- Following the plan (1/2)

You should explain why you did not implemented all user stories that you are supposed to. You did not provide detail stories for iter2. User story and development task are not the same thing. User stories should be in perspective of users. (-1).

Total

(16.5/25)

Comments

Please do not spend the whole page showing only one detail user story in user story document. User story and development task are not the same thing. User stories should be in perspective of users.
