

Installing Jenkins on your local PC

-Try: `sudo apt-get install jenkins`

This will likely not work...so then use

`wget -q -O - http://pkg.jenkins-ci.org/debian/jenkins-ci.org.key | sudo apt-key add -`

-Try: `deb http://pkg.jenkins-ci.org/debian binary/`

This will likely tell you deb is not a command...so open `/etc/apt/sources.list` and add it in there
(deb included)

-Command: `sudo apt-get update`

-Command: `sudo apt-get install jenkins`

Jenkins is now installed on your local machine. Open a browser and go to `localhost:8080`

Welcome to Jenkins!
