

## Installing composer/laravel on Ubuntu 14.04

I didn't figure this out myself, see instructions if you get confused

Composer installation: <https://getcomposer.org/doc/00-intro.md>

Laravel quickstart: <https://laravel.com/docs/4.2/quick>

Step 1: Open a terminal window

Step 2: Install composer

-Command: `curl -sS https://getcomposer.org/installer | php`

-Command: `sudo mv composer.phar /usr/local/bin/composer`

Step 3: Install Laravel

-Command: `composer create-project laravel/laravel name-of-your-project --prefer-dist`

Composer/Laravel is now installed!

To run Laravel, navigate into the directory of the project you created above.

-Command: `php artisan serve`

Laravel will run on the default port, to change the port simply do the following

-Command: `php artisan serve --port=xxxx`

Voila!!
